

Fishing in mountain lakes

Hundsemvann and Trolltjerna 3 1 2

These are shallow and spectacular mountain lakes, beautifully located behind Skogshorn Mountain. The trout is large and the lakes are well suited for all types of angling.

Average trout weight is 400 - 900 g. Walking time: Hundsemvann, approx. 30 min., and Trolltjerna, approx. 90 min.

Storevann, Helsingvann and Attjern

These lakes are on the way towards Lykkja and have good stocks of mountain trout. Here are also perch, especially in Attjern. Average trout weight is approx. 600 g. NB. Possibility for renting boats.

Løkvadtjern, Lintjern and Hamartjern

These fish-rich lakes are located in forest, boggy and in open terrain. Exciting lakes both for fly-fishing and trolling. Average fish weight is 250 – 500 g. Walking time: Løkvadtjern, approx. 10 min., Lintjern, approx. 5 min., and Hamartjern, approx. 15 min.

Gravsettjern and Helgetjern 10 10

Small and spectacular bog lakes, easy accessible from the road towards Lykkja. Here are trout and perch in both waters. Helgetjern is only for fly-fishing. Large fish are set out in these lakes! Average fish weight is 200-600 g.

Horntjern, Mellomtjern and Grytingtjern

Small lakes with lots of fish where you also can take fish under the minimum size limit. A fantastic alternative if you want to experience breathtaking scenery. The lakes flow out in the Hydne River, which plunges 200 metres down the mountainside forming Hemsedal's most beautiful waterfall, Hydnefossen. Average fish weight is 150 - 400 g. Walking time: Horntjern, approx. 60 min., Mellomtjern, approx. 75

Veikintjerna 🛈 🔞

min., and Grytingtjern, approx. 90 min.

Small, beautiful lakes magnificently located in the mountains between Lio and Fagerset. Well suited for fly-fishing for trout of different sizes. Average fish weight is 250-750 g. Walking time: Approx. 90 min.

Both lakes are a part of the Hemsila watercourse. Large fish are often taken from the wall of Eikredammen dam. A sinker with suspended fly works best. Average fish weight is 200 – 600 g.

River fishing

Hemsila

The fishing strain in Heimsila is great and a catch limit is therefore introduced.

Please read the rules on the opposite page closely!

The lower part of Hemsila runs slowly. The river is crystal clear and thus best suited for fly-fishing. The wild Hemsila trout is shy and difficult to dupe. Try to find jumping fish, and feel free to use a «Hemsedal's fly» on the end of your line.

The upper part of Hemsila has alternating rapids, but quiet parts as well. Perfect for all types of angling. The largest fish are caught here. Average fish weight is 300 - 1200 g.

Grøndøla 👨

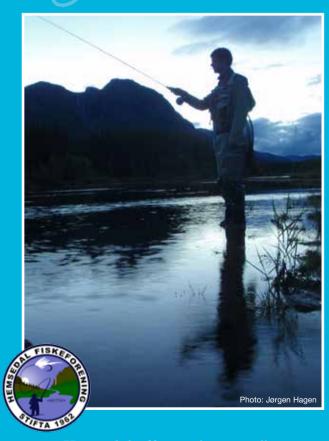

Here, the best fishing is from Flatsjøen and 2 km upwards. The river runs quietly, with less flow of water than Hemsila. The vegetation along the bank is dense, making fly-fishing very demanding. Grøndøla offers good fishing, and many people are drawn here because of the great fishing strain in Hemsila. Average fish weight is 300 - 600 g.

Mørkedøla, Buliåen and Grøndøla (upper part) 2 2 2 These areas are best suited for angling with worms. Here is little flow of water, but fish weighing up to 2 kg have been set out. Average fish weight is approx. 250 g.

Angling in 4 rivers and 18 lakes

Hemsedal offers unique angling opportunities during the summer. The Hemsila and Grøndøla rivers are two of Norway's best trout rivers.
